Professional Summary

Experienced Software Developer with over **1.5 years** of expertise in building **web applications**, **scalable backends**, and **cross-platform mobile apps** using **Node.js**, **Python**, **Flutter**, and **Serverless architectures**. Well-experienced in **Flutter development** for both **Android and iOS**, delivering high-performance mobile applications. Proficient in both **frontend and backend development**, with hands-on experience in projects such as **EV charging platforms**, **e-commerce systems**, and **internal enterprise tools**. Adept at working in **Agile environments**, collaborating in **cross-functional teams**, and integrating **real-time features** using **WebSockets**. Skilled in **RESTful API design**, **third-party integrations**, and delivering **clean, maintainable code**. Passionate about **solving problems** and creating **user-centric digital solutions**.

Technical Skills

Backend Development: Node.js, Express.js, PHP, .NET MVC

API & Integrations: REST APIs, Razorpay Integration, Third-party API Integration

System Architecture: Microservices, MVC Architecture

IoT & Communication: WebSocket, TCP, MQTT, OCPP 1.6 (EV Charging), Real-time Telemetry

Databases: MongoDB, MySQL, SQL Server, Redis (Learning), PostgreSQL (Learning)

Frontend & Mobile: Flutter (Android & iOS), JavaScript, HTML, CSS, Bootstrap, jQuery, AJAX

DevOps & Tools: Docker, Git/GitHub, SVN, GitHub Actions (Learning), Kubernetes (Learning)

Cloud & Services: AWS (EC2, S3, OpenSearch – Learning)

Messaging & Streaming: Kafka (Learning)

Project Management: Agile/Scrum, Jira, Documentation, Code Review, Team Collaboration

Areas of Focus / Currently Learning

Cloud Computing • CI/CD Pipelines • Distributed Systems • Scalable Architecture

Professional Experience

Junior Software Developer

Outdid Unified Pvt Ltd, Bangalore, India

May 2024 – Present

Key Responsibilities:

- Developed software solutions that can easily scale for both internal tools and client-facing applications across various platforms.
- Worked with teams that included product management, Web app developers, QA, and mobile developers to outline project requirements, timelines, and deliverables.
- Mentored co-developers by promoting clean code practices, conducting code reviews, and sharing knowledge of architectural patterns and technologies.
- Troubleshoot and fixed complex software defects, which improved performance, reliability, and user satisfaction.
- Used **GitHub** for version control to manage codebase collaboration and maintain release integrity.

eCommerce Platform (Microservices Architecture)

- Built the backend of a modern eCommerce web application using Node.js, Express, and MongoDB, designed with microservices for flexibility and scalability.
- Implemented important backend services including user authentication, product catalog, shopping cart, order management, and payment processing.
- Created secure, RESTful APIs to support the frontend and ensure smooth user experiences during browsing, in the cart, and at checkout.
- Integrated a payment gateway for online purchases, ensuring secure transaction handling and order confirmation processes.
- Developed a feature-rich admin web portal for managing products, uploading images and details, tracking customer orders, and viewing business analytics.
- Set up product upload and inventory tools with real-time updates and pricing management options.
- Used Docker to containerize backend services, ensuring consistent deployment and environment consistency across development, staging, and production.
- Focused on performance, security, and reliability across all backend modules.
- Worked closely with frontend developers and QA teams for seamless integration from end to end.
- Managed tasks and sprints using Jira in an Agile development setting.

EVSE – Electric Vehicle Charging Platform

- core backend developer for a full-featured EV charging platform that supports admin web portals and mobile applications for Android and iOS.
- Designed and implemented EV charger communication using the OCPP 1.6J protocol, ensuring smooth integration with compliant EV charging hardware.
- Developed a strong and scalable backend using Node.js and Express, with MongoDB as the main database for managing user, session, and transaction data.

- Created WebSocket-based communication to allow real-time interaction between EV chargers and the backend server to control and monitor sessions.
- Enabled a wallet-based charging model, which lets users start or stop charging sessions and automatically deduct charges from their wallet balance.
- Integrated Razorpay for secure, real-time wallet top-ups and payments.
- Set up live charging session dashboards that display data such as energy usage, duration, and cost in real time on both admin and user interfaces.
- Integrated Google Maps API to help users find nearby EV chargers with navigation support.
- Developed and maintained multi-role admin dashboards to manage charger inventory, monitor transaction logs, and generate usage analytics.
- Worked closely with the mobile app team to ensure a consistent and responsive experience across platforms.

water purifier mobile app

- I designed and developed a responsive water purifier app using flutter with Getx. This created a modern, user-friendly interface.
- Developed a cross-platform Water Purifier mobile application using Flutter for both Android and iOS, enabling real-time service booking, status tracking, and subscription management.
- Integrated key features such as push notifications, technician assignment system, subscription plan handling, and WhatsApp notification integration, improving user engagement and operational efficiency.

VTs – Vehicle Tracking System

- Built a complete backend system that powers live vehicle tracking, trip monitoring, and fleet analytics for operators, drivers, and parents.
- Designed and implemented GPS telemetry processing with support for high-frequency location updates from real tracking devices.
- Developed real-time socket communication using **Socket.io** to broadcast live vehicle locations, alerts, and trip events to dashboards and mobile apps.
- Built secure authentication and role-based access control (Admin, Operator, Driver, Parent) to manage users and permissions.
- Implemented trip lifecycle management — trip start, active tracking, geofence monitoring, alerts, and trip completion workflow.
- Created geo-spatial database queries in **MongoDB** to efficiently store and analyze route data, speed events, and distance.

- Automated notifications for parents and operators on speed alerts, device offline status, route deviation, and vehicle activity.
- Seamlessly integrated webhook receiver pipeline to ingest telemetry data securely and at scale.
- Built admin dashboards for fleet overview, driver assignment, live maps, and tracking history playback.
- Collaborated with frontend/mobile teams to deliver real-time maps and driver apps with smooth UX.

BMS – Battery Management System

- Developed backend services to monitor EV battery health, temperature, voltage, and state-of-charge in real time.
- Designed secure MQTT/WebSocket-based pipeline for IoT devices to push live battery telemetry to the server.
- Built real-time dashboards for battery health diagnostics, charging status, and performance history.
- Implemented thermal-alerts, low-battery notifications, and fault detection logic to improve reliability and safety.
- Created analytics modules to track charge cycles, battery efficiency, and predictive failure patterns.
- Designed scalable database models in MongoDB for sensor readings, device info, and alert logs.
- Integrated live maps to track battery-powered vehicle/asset location and energy usage patterns.
- Ensured secure API communication, role-based access, and audit-logging for system safety.
- Worked closely with hardware engineers to troubleshoot data formats and enhance telemetry reliability.

Education

Bachelor of Information Technology (B.Tech)

KGISL Institute of Technology

May 2024

Higher Secondary Certificate (HSC)

KV Institution, Coimbatore

March 2010

Secondary School Leaving Certificate (SSLC)

Sree Dharmasasthra Matric Higher Secondary School, Coimbatore

March 2018

Languages

- Malayalam — Native
- tamil — intermediate
- English — Intermediate
- Kannada — Beginner

Declaration

I hereby declare that the information provided above is true and accurate to the best of my knowledge and belief.
